# *Hungarian Social Sciences historical sociology*

## INTRODUCTION

Péter Nagy, Tibor

MTA Doctor Wesley Center for Religious and Sociological Research at [Nagypetertibor@gmail.com](mailto:Nagypetertibor@gmail.com)

### *1020*

There is a mysterious acronym for many: this is "Interco\_SSH." The unlocking, as seen in the inter-ssh web site (URLi): international cooperation on social in the field of historical analysis of diasporas and humanities. The European Union supported it Gisèle Sapiro, a French literary sociologist at the European Institute of Fine Arts in Paris Ciology Institute (which is called the director of the sociologist jargon called Bourdieu) has been awarded the title in 2013 as well. Comparative historical sociological point of view according to the subchapter of the program formally completed in 2017 and explores future opportunities. The program is partly thematic, part distributes the problems regionally. The program council in social sciences in many European and non-European countries Module Analyzing Module Ko and the program is institutional interdisciplinarity / internationality it led to the Hungarian leg of the theory, including three perspectives Karády, who was the director of research for the CNRS ( *Center nationale de la recherche scientifique* ) for a long time , then \ t

CEU (Central European University) professional. Karády's work - Péter Nagy Ti it works with the wine on the institutional basis of the Wesley Center for Religious Sociology (URL2).

Research - like all similar European projects - includes a whole lot of shores in France, Austria, England, Italy, the Netherlands, Hungary and Argentina<sup>1</sup>) common "core" to be introduced: this is the sociological research of seven disciplines: economics, anthropology, sociology Logistics / Demography, Political Science, Philosophy and Psychology / Psychoanalysis, and Literature — The Last With Restriction to Everywhere in the History of National Literature is the subject of research. The Hungarian participants of the research from the first moment indicated that due to the peculiarities of the Hungarian scientific development between 1945 and 1990,

The partners are organizational in these countries they are tied, but it is thematically speaking about Brazil, Mexico, Germany, Romania, Spain - countries, Sweden, Slovakia and the USA.

Due to the low degree of institutionalization of some of the disciplines listed in the article, much of the science of history and ethnography is just a matter of state and legal science. It can be represented through its history.

According to the interest of the two Hungarian research leaders, the most important result of the research is a serial, semi-personal, partly scientific, product (book and study) database, compiled from a variety of sources. detailed analysis of these months will take place. In addition, short summaries (URL3s) of longer-term science topics were born and longer studies STUDIES [1], which enrich the book and website market in English.

At the same time, we were convinced that social sciences and humanities The history of its complexity inventions in no way can be presented not only scientometrics comparable, but *tar it is also* less sensitive to *tiny* delicacies, but also to the longer narrative of science by scientists in *different* disciplines. As a solution, a thematically open, Hungarian-language version There was a series of ferencias, in which we also looked at comprehensive analyzes and case studies, and gave them plenty of discussion time, paying attention to the fact that presentations of necessarily internal disciplines were subject to criticism from representatives of neighboring disciplines. The first two pieces of the conference series are social and human sciences from the modern history of the United States of America (URL4, URL5) - we have selected this version of *Magyar Tudomány-siAmot* from the improved versions of dozens of lectures. The next eight conferences in the spring of 2017 will lead to the break-up of certain disciplines before 1990 - has worked on her (URL6). The conference The series ends with a conference on the Millennium Situation Analysis (URL7) in the autumn of 2017.

This *Hungarian Science* Number is a science Gábor Forrai, a philosophical philosophy and sociology of science, presents Márta Márta's analysis after two theoretical introductions, and presents two approaches in three main topics. Among the studies analyzing the situation of a large number of scientists, Viktor Karády is the statistical analysis, György Tverdota is the narrative reflection work. species. History of science the functionalist approach of his thesis is illustrated by Éva Hideg's writing through personal events, the work of Mihály Csákó. In the genre of the case study, Zsuzsa Kádár's work represents the follow-up of the only topic in time. Kingaé Pétervári examines the political-social function of her work.

History of science and science our belief is that this kind of richness of approaches can bring most significant results, which are of interest to the narrow profession.
